AGRICULTURAL SUPPLY & DEMAND ESTIMATES

Approved by the World Food and Agricultural Outlook and Situation Board ● USDA

#99

March 11, 1980

HIGHLIGHTS

World and U.S. demand continues strong for feedstuffs. Export prospects have improved substantially for corn, while marginally higher levels are indicated for soybeans and soybean meal. The soybean crush also has been increased slightly because of stronger demand for soybean meal. Cotton supply and use estimates are unchanged from February 12, while wheat and rice estimates are unchanged from January 28.

Corn Export Estimate Increased

The 1979/80 corn export estimate has been increased to 2.4 billion bushels, 125 million above the January 28 estimate, and nearly 275 million above last year's record. The higher estimate reflects a decrease in export availabilities from Argentina as a result of deteriorating crop prospects and growing world demand as importing nations seek new sources of grain in the face of strong competition from the USSR. U.S. feedgrain exports in 1979/80 are forecast at 69 million tons, 15 percent above 1978/79.

Corn carryover stocks in 1979/80 are now expected to total around 1.7 billion bushels, an increase of 400 million from 1978/79. Of the total, about 1 billion bushels will likely be in the farmer-owned reserve or CCC inventory. If quantities moving into the reserve are not adequate to maintain prices at pre-suspension levels, corn will be purchased by CCC.

With the recent improvement in export prospects and lower expected carryover, corn prices for the 1979/80 season are likely to average from \$2.30 to \$2.50 per bushel. This is 5 cents above the previous estimate and above 1978/79's average of \$2.25 per bushel.

Soybean Meal Usage Stronger than Expected

Soybean meal disappearance has been revised up for both domestic feeding use and for export. Domestic feed use of soybean meal is now expected to run over 7 percent larger in 1979/80. Improved prospects for United States poultry output in 1980 combined with a very favorable meal to corn price ratio are contributing to the stronger domestic demand. Soybean meal exports are now expected to increase by about 9 percent in 1979/80. Favorable meal to corn prices are contributing to the strong soybean meal export movement which was up 10.5 percent during the first four months of this marketing year. Strength in the soybean meal market is also attributed to the likely purchase of soybean meal by the Soviet Union from other export origins to replace most of the soybean meal contracted for originally from the United States.

With a higher usage of soybean meal the domestic U.S. soybean crush should reach 1.1 billion bushels. This will add additional soybean oil supplies and increase downward price pressures in the vegetable oil market with demand steady to a little weaker than anticipated previously. Domestic soybean oil usage was up only 1 percent in the first quarter. Large supplies of competing fats and oils, particularly sunseed oil and lard, have held soybean oil usage in check. However, lower prices for soybean oil for the remainder of this year should encourage some pickup in usage.

Soybean exports were also increased slightly as fore-casted soybean output in Argentina was cut by 10 million bushels. Much of the Argentina soybean production would be exported in this marketing year as soybeans.

The increased soybean crush and exports will reduce carryover from 440 million bushels to an estimated 425 million in this marketing year. Season average soybean prices at the farm should average between \$6.00 and \$6.40 per bushel down 5 to 10 percent from last season's \$6.66. Soybean oil prices are expected to be down about 10 percent with soybean meal prices down by 5 to 10 percent.

1/ Marketing year beginning Aug. 1. 2/ The "probable variability" reflects the "root mean square error" and/or "standard errors of estimate" and judgement. Chances are about 2 out of 3 that the outcome will fall within the indicated ranges. 3/ Based on Bureau of Census data. 4/ Includes imports. 5/ Difference between ending stocks based on Bureau of Census data and preceding season's supply less distribution. 6/ Less than 0.05. 7/ Season average farm price, domestic measure, cents per pound; metric measure, dollars per kilogram. 8/ Weighted average price for the first 5 months of the season; not a forecast for 1979/80. 9/ Less than 0.005. Note: Totals may not add due to rounding.

The Agricultural Supply and Demand Estimates Tables were prepared by the Interagency Commodity Estimates Committee for:

FEED GRAINS: Paul Meyers, Chairman, WFAOSB; Jim Rudbeck, FAS; Orville I. Overboe, ASCS; Ralph Tapp, AMS; Bruce Wright, ESCS.

WHEAT: Paul Meyers, Chairman, WFAOSB; Larry Hall, FAS; David Spalding, AMS; Randell Weber, ASCS; Bruce Wright, ESCS.

RICE: Paul Meyers, Chairman, WFAOSB; Frank Gomme, FAS; Charles Hunley, AMS; George Schaefer, ASCS; Bruce Wright, ESCS.

SOYBEANS, COTTONSEED AND OILS: Jim L. Matthews, Chairman, WFAOSB; Alan E. Holz, FAS; George W. Kromer, ESCS; David Spalding, AMS; Harry Sullivan, ASCS.

COTTON: Russell G. Barlowe, Chairman, WFAOSB; Wayne E. Bjorlie, ASCS; Donald Bratton, AMS; R. Samuel Evans, ESCS; Gordon H. Lloyd, FAS.

Conversion Factors

Bushels to metric tons

Area

Wheat & soybeans = bushels x .027216 1 acre = .404694 hectares

Barley = bushels x .021772

Corn, sorghum,

rye = bushels x .025401 1 hectare = 2.471044 acres
Oats = bushels x .014515

480 lb. bales to metric tons

Cotton = bales $\times .217727$

Cwt. to metric tons

Rice = cwt. x . 045359

Kilograms to pounds

Kilogram = 2.204622 pounds
